

**AMERICAN COUNCIL OF LIFE INSURERS
AMERICAN INSURANCE ASSOCIATION
PROPERTY CASUALTY INSURERS ASSOCIATION OF AMERICA**

July 22, 2010

Dear Chairman Miller:

The undersigned trade associations ("the Trades") together represent the great majority of the life insurance and property and casualty insurance industries. We appreciate the opportunity to provide additional comments concerning the Project Regarding Income Earned by Non-Corporate Income Taxpayers Derived from Ownership Interest in a Partnership or LLC (the "Project").¹ We appreciate also the opportunity to speak at the upcoming meeting of the Income and Franchise Tax Uniformity Subcommittee (the "Subcommittee") of the Uniformity Committee of the MTC on July 25.

These comments were originally prepared in response to a Draft Statute posted to the MTC's website in February 2010 (the "Draft Statute"). However, on July 15, two new and revised versions of the Draft Statute (the "Revised Draft Statute") were posted to the MTC's website and will, we assume, be presented to the Subcommittee for the first time at the July 25 meeting. Although we have attempted to react as quickly as possible and have included our initial thoughts with respect to the Revised Draft Statute below, we have not yet had time to undertake a thoughtful discussion regarding the full extent of the Revised Draft Statute. Should the Subcommittee remain committed to the Revised Draft Statute following its initial consideration at the July 25 meeting, we would request a further opportunity to address the Subcommittee regarding this matter.

Summary of Comments. We urge the Subcommittee to reject both the Revised Draft Statute and the Draft Statute (collectively, the "Draft Statutes") for at least the following reasons:

1. The Revised Draft Statute represents a **fundamental expansion** of the Project that would have **dramatic and unfair consequences** for insurance companies and their policyholders nationwide.
2. The Draft Statutes are based on a faulty premise. **Insurance company taxpayers pay higher taxes than non-insurance corporate income taxpayers.**
3. The Draft Statutes **discriminate** against pass-through entities depending on what type of entity owns the majority interest, creating **new inequities**, inconsistencies, and controversies.
4. Any concern among Subcommittee members regarding "abusive" transactions is ill-founded. **Insurance companies are subject to extensive state regulation that creates strong incentives for investment decisions to be driven by nontax business considerations.** States already possess ample tools to combat transactions perceived as abusive.
5. Although the Subcommittee has itself identified several areas requiring further study, to the best of the Trades' knowledge such research has not been conducted.

¹ These comments are intended to supplement our submissions dated February 19, 2010 and March 23, 2010. Our prior comments were based on previous drafts of the Draft Statute, including a draft dated February 19, 2010.

Background

The Draft Statute.² Under the Draft Statute, whenever an insurance company owns at least a 50% ownership interest in a “pass-through entity” engaged in a trade or business other than an insurance trade or business, the pass-through entity becomes subject to tax on the investment income passed-through to the insurance company. Although the Subcommittee’s discussions to date have focused on what were described as abusive transactions, a recent memo authored in support of the Draft Statute states that the “lack of a tax avoidance motive is immaterial to the general purpose” of the Draft Statute, because the purpose of the Draft Statute is “to address an inequity in the income tax treatment of pass-through income generated by separate business entities that is entirely the result of the fact that some companies are not subject to state income tax.”³

The Revised Draft Statute. The Revised Draft Statute would impose tax on a pass-through entity if 50% or more of the interests in the entity are owned by an insurance company or any other entity not subject to income tax except an organization exempt under Section 501 of the Internal Revenue Code. The application of the Revised Draft Statute is not limited to pass-through entities engaged in a trade or business.

Detailed Analysis

1. The Revised Draft Statute represents a fundamental expansion of the Project that would have dramatic and unfair consequences for insurance companies and their policyholders nationwide.

In addition to the concerns expressed in the remainder of these comments with respect to both Draft Statutes, the Revised Draft Statute suffers from three fatal flaws, detailed below.

First, the Revised Draft Statute is not limited in its application to pass-through entities engaged in a trade or business. Thus, the Revised Draft Statute would impose tax on passive investments such as investment funds held by insurance companies in support of their obligations to pay policyholder claims. Imposing tax on the investment income of insurance companies would represent a fundamental shift in the long-standing nationwide system of state insurance taxes, which rests on the foundation of premium taxation, retaliatory taxation and constitutional and statutory “in lieu” protections, and has been the states’ chosen system for taxing the privilege of conducting the insurance business nationwide.⁴

The underwriting and investment aspects of the insurance business are inextricably interrelated. As stated by the U.S. Supreme Court (in describing a life insurer’s underwriting and investment receipts):

An insurance company obtains most of its funds from premium paid to it by policyholders in exchange for the company’s promise to pay future death claims and other benefits. The company is also obligated to maintain reserves, which, if they are to be adequate to pay future claims, must grow at a sufficient rate each year. The receipt of premiums necessarily entails the

² See Alternative Draft 1, Memo from Sheldon Laskin to the Subcommittee, dated February 19, 2010.

³ Memo from Sheldon Laskin to the Subcommittee, dated June 11, 2010, fn 4.

⁴ Oregon is the only state that taxes insurers under a net income-based “excise” tax, but not a premium tax.

creation of reserves and additions to reserves from investment income. Thus the insurance company is not only permitted to invest, but it *must* invest; and it *must* return to the reserve a large portion of its investment income...

U.S. v. Atlas Life Insurance Co., 381 U.S. 233, 247 (1965). Although the premium tax component of the insurance tax system is based on gross underwriting receipts, this is a *comprehensive tax system on the privilege of engaging in an insurance business*, in all of its aspects, in the states. Thus, states have heretofore deemed the insurance tax system sufficient to tax the entire insurance business, i.e., its underwriting income (premiums) and its investment income.⁵

The inappropriateness of superimposing on this system a new tax on investment income is best illustrated by a simple example comparing a non-insurance corporate income taxpayer with an insurance company taxpayer. To make the example as objective as possible, it is based on the highly unlikely assumption that both taxpayers have the same amount of investment income. In reality, however, as a general rule, investment income would make up a much higher portion of the overall income of an insurance company than a non-insurance company, such that the proposal would result in a significantly higher tax burden on the insurance company than the non-insurance company.

	Non-Insurance Co.	Insurance Co. current law	Insurance Co. after Revised Draft Statute
Gross Receipts/Premiums	\$1,000	\$1,000	\$1,000
Less: expenses	(\$950)	(\$950)	(\$950)
Investment income from pass-throughs ⁶	\$100	\$100	\$100
Net income before taxes	\$150	\$150	\$150
Less: Taxes			
Income tax (7%)	\$10.50	\$0	\$0
Income tax on pass-through entity (7%)	\$0	\$0	\$7
Premium tax on gross premiums (2%)	\$0	\$20	\$20
Total tax paid	\$10.50	\$20	\$27

In this simple example, under existing law, an insurance company subject to 2% premium tax pays nearly 200% the amount of tax that a non-insurance company taxpayer subject to a 7% income tax with the exact same receipts and expenses would pay (\$20 vs. \$10.50). Subjecting the insurance company to the income tax on its investment income heightens the disparity, increasing the burden on the insurance company to nearly 260% (\$27 vs. \$10.50).

It is no solution to suggest that insurance companies could merely hold investment assets directly, rather than in partnership or limited liability company form, in order to avoid the application of this onerous and inequitable rule. Insurance companies hold investment assets in a variety of legal forms for legitimate and important business reasons. For example, an insurance company might choose to create a medium-term corporate bond fund to purchase corporate debt. The insurance company might hold 99.9% of the interest in the fund, using the remaining interest to provide incentive compensation to personnel responsible for managing the company's medium-term corporate bonds. Imposing income tax on the income earned by the insurance

⁵ Although some states supplement the premium tax with an income tax, insurers are generally permitted cross-tax credits or caps.

⁶ Example is for purposes of illustration and does not necessarily reflect the proportion of investment income that might be earned by an insurance company from a investment held in pass-through entities.

company from the fund could impair the company's ability to meet its obligations to pay policyholder claims,⁷

Finally, the Revised Draft Statute could result in additional tax burdens being imposed on the some of the nation's most vital non-insurance regulated industries, including financial institutions, telecommunications companies, and public utilities. These stakeholders have not had the opportunity to address the Subcommittee, and it would be imprudent for the Subcommittee to act with respect to the Revised Draft Statute without considering the effect of adopting a new tax on these industries.

2. The Draft Statutes are based on a faulty premise. Insurance companies bear a significantly higher burden of state business taxes than non-insurance businesses.

Both of the Draft Statutes purport to be based on the notion that the current system results in an inequity, such that exempting insurance companies from the income tax somehow results in insurance companies bearing a lower tax burden than non-insurance corporate taxpayers. As stated above, the purported purpose of the Draft Statutes is "to address an inequity in the income tax treatment of pass-through income generated by separate business entities that is entirely the result of the fact that some companies [*i.e.*, insurance companies] are not subject to state income tax."⁸ The notion that the current system results in "inequity" that favors insurance companies is demonstrably incorrect, as illustrated by the example discussed above. The results of that example are confirmed by multiple studies conducted by states and economists over decades. It is universally accepted in the academic and economic communities – and recognized by the MTC itself⁹ -- that the insurance tax system imposes a tax burden that is many multiples of the tax burden imposed on non-insurance corporate taxpayers, or that would be imposed on the insurance industry if it were subject to income taxation in lieu of the current insurance tax system.¹⁰

Professor Martin F. Grace concisely begins his study of the relative burden imposed by the state life insurance tax system (*Excessive State Taxation of the Life Insurance Industry: The Case for Reform* (December 23, 2003)) with the simple finding that "[t]he insurance industry is overtaxed."¹¹ Others who have compared the insurance and corporate income tax systems for states and/or industry agree. The following illustrative excerpts from various studies represent only a handful of examples of the relevant research (examples confined to member states of the Subcommittee in the interest of brevity, emphasis supplied):

- **California (2008).** "Economists who have examined state insurance taxes have found that a simple comparison of premiums to net income suggests that **insurance premiums tax revenues are several times higher than a profits tax** would produce... This is also true in California..." *Investment Income and the Insurance Gross Premiums Tax* (California Legislative Analyst's Office at page 4).

⁷ Indeed, the burden of such tax could fall directly on policyholders where an insurance company holds investment funds in a separate account supporting such things as variable life insurance contracts.

⁸ Memo from Sheldon Laskin to the Subcommittee, dated June 11, 2010, fn 4.

⁹ The March 6, 2009 and November 20, 2009 memos to the Subcommittee recognize that Minnesota repealed its income tax on insurers because the premium tax "consistently yielded much higher revenue."

¹⁰ It also is well accepted that the insurance tax system generates a reliable, generally growing source of revenue for the states, far in excess of the revenue that would be generated by taxing insurer income, and that remains steady during periods of economic stress and reduced corporate profitability.

¹¹ It should be noted that Professor Grace is considered a credible source by MTC staff. See Memo from Sheldon Laskin to the Subcommittee, dated February 19, 2010.

- **California (2003).** "All of the available evidence shows that California's tax laws currently impose a **much heavier burden on insurance companies** than on companies in other industries." *The Taxation of Insurance in California* (Hamm, Fortenbaugh, Schmidt, Johanson at LECG Economics and Finance at page iii).
- **California (1991).** "The income-based tax burden on these property/casualty insurers [companies writing between 42.3% and 50.1% of the total California market between 1984-1989] ranged from a low of 16.9% in 1987 to a high of 53.9% in 1985 and **exceeded the tax rates imposed on other industries in every year.**" *California Taxation of the Property/Casualty Insurance Industry* (Hofflander, Nye, Charlesworth, Brydon at Stanford Consulting Group at page i).
- **California (1990).** "These figures illustrate that the **tax burden imposed on the life insurance industry** by the State of California **greatly exceeds that imposed on other California industries.**" *Taxation of the California Life Insurance Industry* (Hofflander, Nye and Charlesworth at page 5).
- **Florida (2006).** "The insurance premium tax has grown in importance as a source of tax revenue in recent years as annual intangibles tax and estate tax revenues have been reduced to zero. **Because of its growing importance as a revenue source, proposals to change this tax warrant careful scrutiny.**" *An Overview of Florida's Insurance Premium Tax, Report No. 2007-122* (Prepared by Committee on Finance and Tax for Florida Senate at page 17).
- **Florida (1991).** "The P&C industry was subject to an **effective tax rate of 33.5** percent in Florida over the five-year period from 1985 to 1989 (using the statutory income measure which is applied for the purpose of insurance regulation). The effective tax rates for the comparison industries in the manufacturing, retail trade and banking sectors ranged from 5.6 to 9.9 percent over the same period." *Comparative Analysis of the Taxation of the P&C Insurance Industry in Florida* (Price Waterhouse at page i).
- **Florida (1990).** "There is a wide acceptance and a statistical basis for determining that each one percent of the insurance premium tax (a gross receipts tax) is equivalent to a 20.4% net income tax." *Report of the Florida Insurance Premium Tax Task Force to the Florida Legislature* (at page 4).
- **Massachusetts (1997).** "Taxes as a percentage of profits are **higher in the insurance industry than in any other industry** in the state and greater than on other financial services." *The Effect of State Tax Policy on the Insurance Industry In Massachusetts* (Prof. Craig L. Moore, University of Massachusetts at page 7).
- **Missouri (2003).** "Banking and other credit institutions paid an average of only \$8000 in 2002. Insurance companies, in comparison, paid an average of about \$86,400 per company, **approximately 20 times the average liability of the non-financial corporations** and nearly eleven times the average liability of other financial institutions." *2003 Taxation of the Insurance Industry in Missouri* (Dr. Edward H. Robb at page 2).
- **Missouri (1992).** "As can be seen from the data...the insurance industry bears a vastly disproportionate tax burden. Nonfinancial corporations with positive net income paid net Missouri income taxes of \$206.5 million in fiscal year 1991. This amounts to an average liability of approximately \$7,100 per return. These corporations also paid \$57.5 million in franchise taxes, an average of about \$2,100 per corporation – a total of less than \$10,000 from both taxes. Insurance companies, in comparison, paid \$124.4 million, an

average of about \$74,000 per company, approximately **8 times the average liability of the nonfinancial corporations.**" *Taxation of the Insurance Industry in Missouri* (Dr. Edward H. Robb at page 2).

- **Texas (2004).** "The premium tax and other state and local taxes impose a **significantly higher tax burden** on property/casualty insurers that the tax they would pay if taxed as general corporations. This study estimates the property/casualty insurers paid \$334 million more in taxes in FY 2003 than they would have if they were taxed as general corporations." *Tax Burden Imposed on Property/Casualty Insurers in Texas* (Ernst & Young at page 1).
- **Texas (2004).** "Because the premium tax applies to a tax base much larger than the base for the franchise tax, the premium tax combined with other state and local taxes, imposes a **significantly higher tax on life/health insurers** than the tax they would pay if they were taxed as general corporations...[W]hile general corporations are subject to a maximum rate of 4.5 percent of net taxable earned surplus (net income), the premium taxes paid by life/health insurers are equivalent to 17.1 percent of net taxable earned surplus." *The Excess Taxation of Life/Health Insurers in Texas* (Ernst & Young at pages 1-2)
- **Texas (1998).** "Price Waterhouse studies prepared in 1991 and 1997 found that the effective tax rate imposed on the P&C industry in Texas was, on average, **4 to 8 times higher than for five other representative industry groups** in Texas over the 1985-1989 and 1992-1993 periods." *Taxation of the Texas Property and Casualty Insurance Industry* (Price Waterhouse at page E-1).

The academic and economic literature is compelling: the current system imposes a higher tax burden on insurance company taxpayers than non-insurance company taxpayers. This burden is imposed on the privilege of engaging in the insurance business – including both underwriting and investing – in a state. The premise of the Draft Statutes, therefore, is false. There is no "inequity" in the current insurance tax scheme that favors insurance companies.

3. The Draft Statutes discriminate, creating new inequities.

However, enactment of either of the Draft Statutes would create substantial inequities where none currently exist, because the Draft Statutes discriminate against pass-through entities owned by entities that are not subject to an income tax (e.g. insurance companies) in favor of pass-through entities owned by companies that are subject to an income tax.¹² The inequities that would be created by the Draft Statutes have not been included within the written analysis prepared to date, have not been considered by the Subcommittee, and are fundamentally unfair. Specifically:

First, the Draft Statute discriminates against insurance companies in favor of non-insurance corporate income taxpayers because non-insurance corporate income taxpayers are permitted to use losses in pass-through entities to offset their income or income earned by other pass-through entities in computing the amount of income tax due. Under the Draft Statute, if a pass-through entity has income, the income would be taxed at the pass-through level to the extent the entity is owned by an insurance company, regardless of whether the insurance company also owns other pass-through entities that have experienced losses. A non-insurance

¹² Note that for purposes of this letter, only the effect of the Draft Statutes on insurance companies will be discussed. As noted previously the Revised Draft Statute applies to more industries than insurance companies and the Subcommittee should solicit their comments as well.

corporate income taxpayer, on the other hand, would be able to offset the pass-through entity's income using either losses earned by other pass-through entities or using its own losses.

Second, the Draft Statute discriminates against insurance companies because any losses in an insurance company could not be used to offset income earned by the pass-through. A non-insurance corporate income taxpayer, on the other hand, would be able to offset its losses against the pass-through entity's income. Thus, an otherwise unprofitable insurance company would in essence face two different state tax liabilities (i.e., premium and retaliatory tax and a reduction in the pass-through entity's income because of the income tax at the pass-through entity level under the Draft Statutes) and an unprofitable non-insurance corporate income taxpayer would not owe tax at all. The example below illustrates this point using a non-insurance corporate taxpayer with \$1,000 of gross receipts, \$1,100 of expenses, and \$100 of investment income earned through a pass-through entity. The non-insurance corporate taxpayer uses the investment income to offset operating losses, and pays \$0 of overall tax. An insurance company with the exact same items, on the other hand, pays \$27 of total tax.

Because the pass-through entity's income cannot be offset by an insurer's losses (whether investment or underwriting), even an unprofitable insurance company would bear the economic burden of gross receipts taxes on its premiums (under the existing premium tax statute) and a new tax imposed on the gross amount of its investment income (under the Draft Statute). The non-insurance corporate income taxpayer, however, is only subject tax on net profits, and if profits are \$0, the amount of tax imposed is \$0.

	Non-Insurance Co.	Insurance Co. after Revised Draft Statute
Gross Receipts/Premiums	\$1,000	\$1,000
Less: expenses	(\$1,100)	(\$1,100)
Investment income from pass-throughs	\$100	\$100
Net income before taxes	(\$0)	(\$0)
Less: Taxes		
Income tax (7%)	\$0	\$0
Income tax on pass-through entity (7%)	\$0	\$7
Premium tax on gross premiums (2%)	\$0	\$20
Total tax paid	\$0	\$27

Third, the Draft Statutes discriminate among insurance companies based on the manner in which they choose to hold investments. Under current law, an insurance company is taxed by most states in the same manner regardless whether it owns an investment directly or indirectly (i.e., through an ownership interest in a pass-through entity). As described below in Section 4, decisions regarding how investments of insurance companies should be held are highly sensitive to state regulation of financial investments, and state regulatory laws create incentives to encourage outcomes in the interest of protecting policyholders. State income tax law should not drive business decisions regarding the form of an investment. The Draft Statutes, however, would discriminate against insurers holding investment in pass-through or limited liability form, creating an incentive, for example, for an insurance company to invest in less than a controlling share of any pass-through entity. The Subcommittee might be well advised to coordinate the creation of any incentives relating to the investments of insurance companies with the NAIC.

Fourth, it appears to be intended that the Revised Draft Statute would not be adopted by a state that subjects insurance companies to income taxation. However, this does not appear to be the case with the Draft Statute. Adoption of the Draft Statute by a state that imposes an income tax directly on insurance companies would impose two income taxes on the same

investment income, once when earned by the pass-through entity and once when passed through to the insurance company. A non-insurance corporate income taxpayer would not be subject to multiple layers of tax on the same income. Moreover, it is not at all clear how the Draft Statute would be applied in states that (a) only subject certain insurers (e.g., domestic companies) to income tax (e.g., Arkansas, Indiana, Wisconsin), (b) apply reciprocal income tax non-retaliation (e.g., Illinois, Nebraska), (c) provide that income tax is creditable (in whole or part) against premium tax (e.g., Florida, Illinois, Mississippi, Nebraska), (d) provide that premium tax is creditable (in whole or part) against income tax (e.g., Louisiana, New Hampshire), (e) apply caps to combined income and premium tax liability (e.g., Illinois, Nebraska, New York), or (f) impose income tax on bases that are, in whole or part, gross (e.g., Indiana, New Hampshire). Depending on how these issues are addressed, the existing inequities identified above could be aggravated.

4. Any concern among Subcommittee members regarding “abusive” transactions is ill-founded. Insurance companies are subject to extensive state regulation that requires investment decisions to be driven by nontax business considerations. States already possess ample tools to combat transactions perceived as abusive.

The primary goal of state regulation of insurance companies is the protection of policyholders. To ensure that an insurance company will have sufficient funds to cover policyholder claims, states exercise stringent financial oversight of insurance companies. Although the purpose of this system of regulation is to protect policyholders, the system operates to prevent insurance companies from engaging in the type of abusive, tax-motivated transactions about which members of the Subcommittee have previously expressed concern in at least the three ways described below.

First, state insurance regulators review the financial aspects of insurance companies on a regular basis, at least quarterly. The rules for financial regulation of insurance companies are promulgated by the National Association of Insurance Commissioners. States must use these rules to maintain their accredited status.

Second, states regulate the investments of insurance companies by applying an investment law with a variety of restrictions (either the NAIC Defined Limits Version or the Defined Standards Version. Under the Defined Limits Version An insurance company may invest only in those investments permitted by statute and only in limited percentages. Under the Defined Standards Version, the capital and surplus of an insurance company and a certain percentage of reserve liabilities must be invested in very conservative investments, and the state applies a “prudent person” approach to investments in excess of a certain threshold. States commonly regulate the investments of insurers in affiliates other companies and subsidiaries, limiting the amount an insurance company may invest in subsidiaries to 10% of the amount of the company’s “admitted assets” (i.e., assets that are counted in determining the solvency of the company). Insurance commissioners may enjoin companies from making investments that would violate these restrictions, and insurance companies that violate the restrictions are subject to various penalties, including fines. Thus, because an investment in a controlled affiliate is subject to limits driven by state insurance regulation, it is generally true that the decision whether to make such an investment is driven by nontax, business considerations.

Third, insurance companies are subject to both fixed minimum capital requirements and so-called “risk-based capital” or “RBC” requirements that operate to discourage companies from holding assets in affiliated entities. RBC requirements are determined through the application of formulas developed by the NAIC that apply various modeling, correlation and discount factors to compare the value of the actual capital held by an insurance company (called “total adjusted capital” or “TAC”) to its RBC. When the ratio of TAC to RBC reaches a certain threshold level, state regulatory law permits the insurance regulatory agency to take action ranging from permissive intervention to assuming control of the company. RBC ratios are also relied on extensively by market participants (investors, lenders, rating agencies) as a measure of the financial strength of an insurance company.

In computing an insurance company's RBC ratio, different assets held by the insurance company are included at anywhere from 100% to 30% of their value. For example, debt rated A/a or better is subject to a 0.4% haircut, whereas debt rated B/B is subject to a 10% haircut. These discounts create a strong disincentive for insurance companies to invest in any assets other than highly-rated debt instruments, because of the high discount associated with such investments in the RBC calculation. Because investments other than highly-rated marketable debt are disfavored by the state insurance regulatory scheme, it is generally true that the decision whether to make such an investment is driven by nontax, business considerations.

Finally, members of the Subcommittee have previously expressed concern that certain businesses previously subject to income tax were "restructured" to "shift income" from a corporate income taxpayer into an insurance company exempt from corporate income tax. This concern is ill-founded, again because the state insurance regulatory system creates a strong disincentive to hold assets in an insurance company other than those needed to cover policyholder liabilities. Specifically, state insurance regulatory laws impose restrictions on the ability of an insurance company to pay dividends. Dividends are permitted only up to a certain percentage of surplus, and are only permitted with regulatory approval. Because of this restriction, the decision whether to hold an investment in an insurance company or an affiliate is driven by nontax business considerations.

For all of these reasons, members of the Subcommittee should not be concerned that existing rules permit "abusive" transactions. To the extent that members remain concerned about "stuffing" transactions, state income tax laws already include adequate tools to permit the State to deny companies the tax advantage sought in connection with such transactions.

5. Further research is required.

The Draft Statutes should be rejected because the Subcommittee has not yet investigated several areas of study that the Subcommittee itself identified as necessary research. As members are aware, during the March 2008 meeting of the Subcommittee, Michael Fatale presented a letter from the Commissioner of the Massachusetts Department of Revenue requesting that the Uniformity Committee consider undertaking a project relating to the ownership by insurance companies of "non-insurance businesses" in pass-through entities, due to concern that "the structure is being used for tax avoidance."¹³ Mr. Fatale raised the example of an insurance company owning a parking garage. The Commissioner's letter indicated that a proposal relating to this issue had been made in Massachusetts, but that members of the 15-member Study Commission assigned to consider the proposal recommended that the proposal be slated for further study, as they believed the threat of retaliatory taxation "warranted more comprehensive review."¹⁴ Subsequent memos by MTC staff have also suggested a need to conduct a survey of state retaliatory tax practices.

To the best of the Trades' knowledge, the Subcommittee has not conducted a comprehensive review of the threat of retaliatory taxation. As we have previously commented, the Trades have serious concerns that the threat of retaliatory taxation is very real. The Draft Statutes rely on a fiction for the purpose of avoiding insurance retaliatory taxes. This fiction -- that a pass-through entity is a taxable entity -- applies only when the pass-through entity is owned by limited, defined entities, including insurance companies. By singling-out insurance companies, the Draft Statutes invite retaliation by the states. Unless the Draft Statute (or Revised Draft Statute) is simultaneously and uniformly enacted in all states (which would be unprecedented), insurance companies domiciled in an adopting state face the likely imposition of retaliatory taxes

¹³ Letter from Navjeet K. Bal to Jan Goodwin and Joe Huddleston, dated February 12, 2008.

¹⁴ Minutes of the March 12, 2008 meeting of the Uniformity Committee, Income and Franchise Tax Subcommittee.

in non-adopting states, placing them at a serious disadvantage relative to other insurers domiciled in non-adopting states and competing in the same market. A non-insurance corporate income taxpayer, of course, would not face these tax or competitive disadvantages, because a non-insurance corporate taxpayer is not subject to retaliatory tax at all.

In addition, further research is needed regarding the insurance regulatory framework. At the July 2008 meeting of the Subcommittee, members expressed concern regarding the use of "restructurings" involving pass-through entities to "shift income" out of a unitary group, and "stuffing" of insurance companies.¹⁵ Concern was also expressed regarding insurance companies moving from "passive" investments into "active" investments. Chairman Spangler noted that from the perspective of an insurance regulator, some of the transactions perceived as abusive might not be abusive, and that it would be helpful to narrow the focus of the Subcommittee to those transactions that were truly abusive.¹⁶

At the conclusion of the discussion, members agreed that more education was needed, and that several issues needed to be more well-defined, including the use of captives by non-insurance companies, the use of LLCs and partnerships by insurers, and issues relating to various types of insurer investments (so-called "good" investments versus "bad" investments). It was also suggested by members that it might be helpful to hear from state insurance regulators. Although we understand that the Subcommittee did meet with a representative from New York State, it does not appear that insurance regulatory topics were discussed.

Conclusion

The Trades urge the Subcommittee to reject both the Revised Draft Statute and the Draft Statute. We look forward to discussing these comments and our earlier comments with you directly at your upcoming meeting.

Respectfully submitted,
